

Just a little disclaimer

As of:

September 7, 2026

Legal Information & Disclaimers

*This disclaimer applies to all BootyNet properties unless a site-specific disclaimer is posted separately.

Nature of Services

BootyNet is a satirical website and does not operate a telecommunications network, hold a spectrum licence, or provide internet, mobile, or data services of any description. Nothing on this website constitutes a real commercial offer. The plans, speeds, coverage maps, and technology described herein are fictional.

Purchases

Any transactions facilitated through this website are for novelty or entertainment purposes only. No purchase entitles the buyer to telecommunications services, network access, or any form of connectivity. BootyNet accepts no liability for anyone who genuinely believed otherwise.

Personnel

Gerald Booty is a fictional person. The BootyNet executive team, customer success staff, and approved partners described on this website do not exist. Any resemblance to real individuals is coincidental and, frankly, a little concerning.

Technology

The Crystal Ball™ is not a real product. BootySat™ is not a real satellite. The towers are loosely based on real structures but do not transmit anything. 6G is not currently available for commercial deployment anywhere in the world, including the greater Lake Taupō area.

Payment Information

No payment or card details are collected, processed, or stored by this website. Any checkout flow is for novelty purposes only and does not process real transactions.

Contact

For legal enquiries, please contact Gerald's assistant at the usual address. She is also fictional.

Data Collected

If you provide an email address (e.g., during a novelty checkout), it's used only to send order confirmations or respond to inquiries. It is not sold, shared with third parties, or used for marketing. You can request deletion at any time by contacting data@bootynet.org.

Analytics

This site uses anonymized analytics (Umami) to understand traffic patterns by country. IP addresses are never stored; they're used momentarily to determine general location, then discarded. Standard server logs (used for security and troubleshooting) may retain IP addresses for up to 8 weeks. These logs are not used for analytics or marketing.

Session Recording

This site uses session replay (Umami) to record how visitors interact with pages, clicks, scrolls, and cursor movement. Approximately 15% of sessions are recorded, not all traffic. Form fields are masked and not captured. Recordings are retained indefinitely, as our self-hosted platform has no built-in mechanism for automatic deletion. As this data is anonymized, we generally cannot isolate or remove a specific individual's session on request. Session recordings and log data are not actively linked to individual accounts, though in principle a logged-in user's activity could be correlated using account login timestamps. We don't do that. Nobody at BootyNet has the time, interest, or staffing (see: Personnel) to review who was logged in and doing what. Frankly, watching individual dashboard sessions sounds exhausting.

Redirect & Error Logs

This site uses the Redirection plugin (WordPress) to log 404 errors and redirect activity, including IP address, user agent, and referrer. These logs are retained indefinitely and

are separate from the standard server logs described above. As IP and user agent alone often aren't unique to one visitor, we can't guarantee we can locate or remove a specific entry on request.

Sale & Use of Data

BootyNet does not sell, rent, or trade user data to third parties. Data such as session replays and log data may be used internally, for example, to understand navigation patterns or fix broken links, but is never shared, sold, or monetised externally. This is partly a matter of policy and partly because a dataset of IP addresses, user agents, and page-scroll behaviour from a satirical ISP website is not, in practice, worth very much to anyone outside it.

Access Restrictions

All visitors are checked against IP address, general location, and user agent as part of normal request handling. Location is determined using Cloudflare's IP geolocation and a local MaxMind GeoIP database. Visitors on outdated or unsupported browsers are redirected to unsupported.bootynet.org. Visitors matching other access rules (e.g. known bad actors, abusive traffic) are redirected to forbidden.bootynet.org, and these events are retained in the same redirect and error logs described above. BootyNet does not block traffic by country, yet.

The other services

BootyNet uses 6 external services

These are:

- Cloudflare ([see Cloudflare usage](#))
- AWS ([see AWS usage](#))
- Phare ([see Phare usage](#))
- Automattic ([see Automattic usage](#))
- Tailscale ([see Tailscale usage](#))
- Purelymail ([see Purelymail usage](#))

The following sites have additional disclaimers of their own:
